

Flower Pot

Materials Required.

- One pot of Spring Flower Soft™
- Garden twig
- Narrow Ribbon
- PVA Glue – Aleenes Tacky or Impex High Tack
- Scissors for cutting
- Sponge or plastercine
- 12th Scale plant pot

Preparation:

- Take some of your Flower Soft™ and place it in a dish so that you can get your fingers in and fluff it up.
- Place a sheet of paper over your working area to collect any spills of Flower Soft™, which can be returned to your pot later.
- Get a piece of plastercine or a sponge handy to stand your flower stems in to dry.

Step 1

Cover the ends of your garden twigs in PVA glue. It is VERY important to use the correct thick high tack glue as some PVA glue's are too runny resulting in the flowers not sticking correctly. We recommend Aleenes tacky glue or Impex high tack.

Step 2

Whilst the glue is still wet hold the twigs over your Flower Soft™ and shake the dish (yes I did say shake the dish!) so that the Flower Soft generously covers all the glued area of wire. Gently tap of excess Flower Soft. It's important not to twirl the twigs around in the dish as if you were making candy floss as this removes the glue and can cause lumps in the Flower Soft, all of the work is done with the hand holding the dish.

Place your completed flower stem in your sponge/plastercine to dry (20-30 minutes).

This process can be repeated several times to achieve the required coverage.

Step 3

Push some plastercine into your scale plant pot, this will hold your flower bush sturdy.

Step 4

Cut your ribbon into 1cm strips, cutting one end into points to give the impression of foliage.

Step 5

Gather together your finished, dry twigs and foliage and arrange into your final shape
Use a needle or something similar to help press into the plastercine and make final tweaks on the overall shape.

**Step 6**

You're finished... add your new plant to your dolls house and make others to match.

TIP: Use flat backed plant pots and add to hand made cards for special family and friends.
